

Here are some examples of my Alteryx workflows that demonstrate my hands-on experience with data preparation, transformation, aggregation, and analysis.

4) Students ran a race consisting of two laps around an outdoor cross country obstacle course. The following dataset (dataset) shows their start time, the time when their first lap was finished, and the time when their second lap was finished. How many students ran the second lap faster than the first? Complete calculations in seconds not minutes.

- A) 13
- B) 14
- C) 15
- D) 16
